WILINE CYBERSECURITY

## Securing your business from evolving threats

We are operating in an environment where over a million new cyberattack mutations occur every day. Every 39 seconds, a malicious actor breaks through a security check. Every 11 seconds, there's a new ransomware victim, and the average cost of such attacks in 2022: $4.54m.

The threat of compromised IT security is only increasing; malicious actors' threats are evolving at a pace never before seen and threats mutate quickly to evade detection. Toolkit-like programs lower the entry bar for cybercriminals, enabling even novice attackers to be successful against scattered security infrastructures. Leveraging an advanced cybersecurity solution in the business environment is more important today than ever before.

CYBER CRIMINALS DON'T DISCRIMINATE BY SIZE OR INDUSTRY

If you're operating a business, you're a target. Without proper cybersecurity measures in place, the question of whether your business might be vulnerable to an attack goes from 'if' to 'when'.

With WiLine's Advanced Cybersecurity Solutions, you can deploy top-tier protection without establishing a cumbersome security operations center (SOC) or hiring costly specialized staff. We simplify and centralize your organization's cybersecurity so you can get back to business without having to worry about security vulnerabilities.

Pillars of a Security Posture

Security Driven Networking	Zero Trust Access	Advanced Endpoint Security
Convergence of Networking and Security at New Network Edges	More users of Network and more Devices IP Enabled (IoT/OT)	Leverage Behaviour analysis and AI protection

WHAT WORKED IN THE PAST DOESN'T WORK TODAY

When we think about cybersecurity, a few key terms usually spring to mind: firewalls, UTMs, Anti-Viruses. First-generation network security (stateful firewalls) focused on securing the connection, and second-generation (next-generation firewalls and UTMs) expanded inspection to the application and content.

However, modern problems require modern solutions. To secure today's digital operations as the perimeter rapidly expands, we employ a multi-layer, integrated and nuanced security approach with features such as Artificial Intelligence(AI) that provide end-to-end protection for your data, users, and infrastructure everywhere even against zero-day threats.

A LAYERED APPROACH TO CYBERSECURITY

WiLine Cybersecurity offers complete protection across the digital attack surface through a combination of technology from best-in-class security partners including VMware, CrowdStrike, Fortinet, and more.

All partners are enterprise-proven, certified, and market leaders in their specific areas of cybersecurity. Your organization can now combine the expertise and technology of the industry leaders in each field to build the most advanced protection by leveraging WiLine as its cybersecurity partner.

VMWARE SASE

In today's highly distributed world organizations are being forced to find solutions for challenges like theft/loss prevention, point of sale and physical security of applications across a highly distributed landscape. Your organization's IT infrastructure must evolve to address this new reality. Secure Access Service Edge is a critical component in this new edge-focused strategy. With SASE you can get reliable, optimised and secure application connectivity independently of the user's location.

WILINE CYBERSECURITY COMPONENTS

Fortinet: next generation firewalls, leveraging its Cyber Threat Assessment Program (CTAP).

CrowdStrike: Advanced endpoint protection with behaviour analysis, AI detection and zero-day threat prevention.

VMware: Secure SD-WAN solution with end-to-end segmentation and edge security options.

WiLine's Multipronged approach for guaranteed security

- Affordable Managed Solution with Managed Layered Approach
- Automatic Detection, Remediation, and Restoration
- Simple to Deploy and Manage

Protect your business against cyber threats. Put your guard up with WiLine.
