

RELIABLE BUSINESS INTERNET SERVICE FOR CONSTRUCTION SITES & TRAILERS

Affordable speed options and fast install helps to keep your project on time and on budget.

At WiLine, we know how important it is to get your construction project up and running quickly and on budget. We have been helping construction companies with internet connectivity since 2002, bringing service to hundreds of sites, and we understand the nuances of your requirements – fast yet safe install, plus reliable and easily scalable bandwidth as the needs of your project change. We are an experienced and reliable partner to the construction industry.

“ At Sobrato Builders, we are committed to delivering our projects on time and on budget. That is why we choose to work with WiLine for our internet at the job site; they are able to deliver reliable and stable services quickly and within our budget. Most recently, WiLine delivered to our new residential project in just two days. ”

Eric Van Dusen, Vice President-Residential Construction, Sobrato Builders

Our affordable, reliable, dedicated business internet is delivered via fixed wireless so there are no streets to trench or cables to pull, making installation quick and easy. And, with WiLine, you get more bandwidth for the buck. Our rates are more affordable than any other provider and the available speed options range from 10 Mbps all the way up to 10 Gbps. It's your choice, based on the needs of your site, and as your project advances, more bandwidth is just a phone call away.

WiLine offers flexible terms for construction sites, appreciating the month-to-month nature of your projects and the potential risk of overruns. We make the process easy so you can stay focused on achieving your objectives. We offer 24/7 support and an SLA-guarantee, all of which we don't expect you will need given our internet service is consistently reliable and pro-actively monitored. We understand time is money and want you to rest easy regarding your internet connection.

Guaranteed SLAs

100% Bandwidth | 99.99% Availability | < 10 ms Latency | < 2 ms Jitter | < 0.001% Packet Loss
